- ✓ We strongly recommend repositioning the aircraft on the stand at startup, using the GSX menu (reposition aircraft option), to achieve a correct fit. All positions except general aviation have been adjusted.
- ✓ Remember to disable the default scenario in case you have third-party scenarios installed to avoid conflict.
- ✓ In some scenarios there are fixed (BGL) jetways that are obviously unable to move. Those are scenery limitations, not errors of the Cartayna file. On such cases where jetways are not operative (such as BGL) AND there is a near door to disembark by foot, the disembarkation option by defect chosen by Cartayna Files is set to be by foot (no jetway).
- ✓ Stands classified as 'Cargo' have the passenger bus option deactivated and the loading belts are set to 'cargo'.
- ✓ VDGS or Marshaller are added to all stands that can accept it, unless they already exists in original scenery.
- ✓ All pushbacks are referenced to current charts, showing nose facing and taxiway where it stops.
- ✓ Multiple, complex and long pushbacks available depending on the chosen stand.
- ✓ Pushbacks longer than standard, or more complex than usual, are marked as LONG in the GSX menu.
- ✓ Sometimes Left or Right pushback is not available, thus only one pushback is offered. (As in real life).
- ✓ Thanks for the purchase of this file which helps us in the long hours of development of our products. You're helping for future Cartayna Files packs to be released.

- ✓ Updated to v3.0.
- ✓ New pushbacks added at taxiway K.
- ✓ Scenery marking error at stand 237.
- ✓ Stands 600 and 601 are actually 218L and 218R.
- ✓ We strongly recommend repositioning the aircraft on the stand at startup, using the GSX menu (reposition aircraft option), to achieve a correct fit. All positions except general aviation have been adjusted.
- ✓ Remember to disable the default scenario in case you have third-party scenarios installed to avoid conflict.
- ✓ In some scenarios there are fixed (BGL) jetways that are obviously unable to move. Those are scenery limitations, not errors of the Cartayna file. On such cases where jetways are not operative (such as BGL) AND

there is a near door to disembark by foot, the disembarkation option by defect chosen by Cartayna Files is set to be by foot (no jetway).

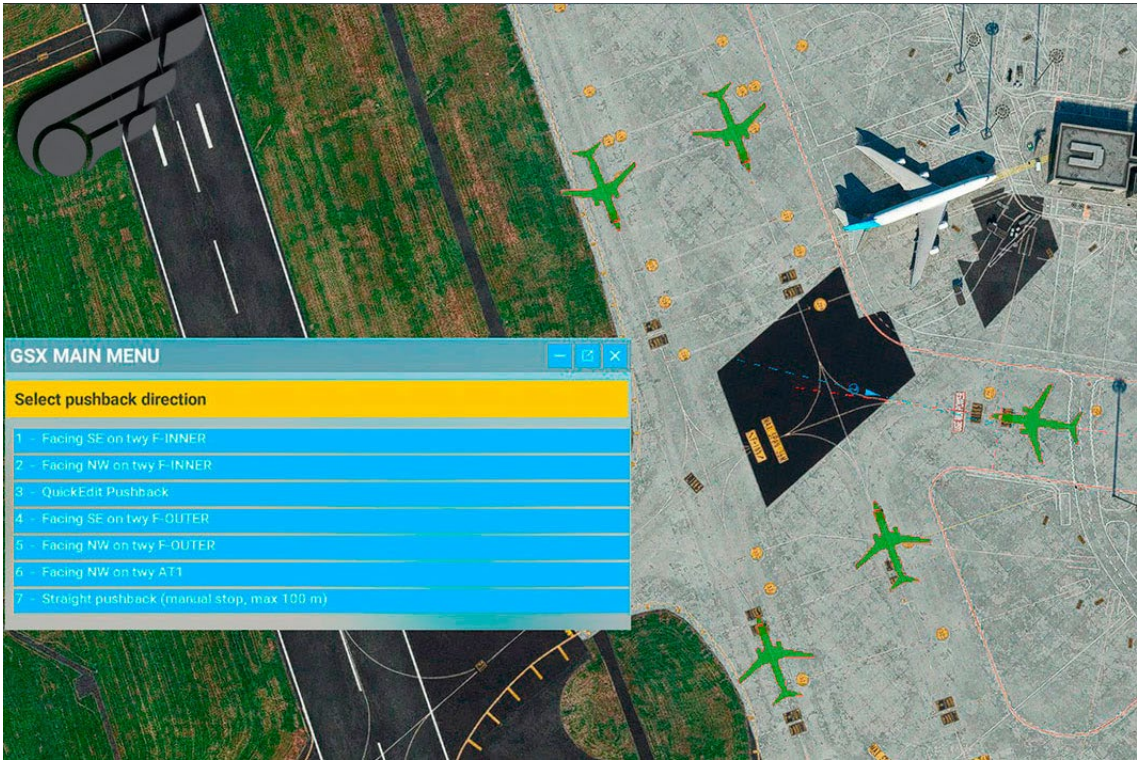

- ✓ Stands classified as 'Cargo' have the passenger bus option deactivated and the loading belts are set to 'cargo'.
- ✓ VDGS or Marshaller are added to all stands that can accept it, unless they already exists in original scenery.
- ✓ All pushbacks are referenced to current charts, showing nose facing and taxiway where it stops.
- ✓ Multiple, complex and long pushbacks available depending on the chosen stand.
- ✓ Pushbacks longer than standard, or more complex than usual, are marked as LONG in the GSX menu.
- ✓ Sometimes Left or Right pushback is not available, thus only one pushback is offered. (As in real life).
- ✓ Thanks for the purchase of this file which helps us in the long hours of development of our products. You're helping for future Cartayna Files packs to be released.
