One of the largest parts about the functionality of Canberra Airport is the VDGS.

Here is a brief guide on how to use it!

# Step 01.

Install the VDGS Module!

Depending on where you purchased your copy, this step may already be completed.

If you purchased this airport via the Impulse Simulations website, enclosed in your downloaded .zip file you will find an application called "AS\_VDGS\_MSFS\_ONLINE.exe" once this has been run as administrator the module will be installed into your community folder automatically.

This process will also include our VDGS Profile for Canberra Airport.

If you have purchased this product directly from Orbx Central, this step should have been completed automatically so you can proceed to start the sim once you have installed the scenery.

# Step 02.

Once you have installed the module, you can now start the simulator and choose your gate of choice.

Configured Gates are: 5, 6, 7, 8, 9, 10, 11, 12 & 13

More gates may be added once MSFS allows for spawn blocking of AI so they don't spawn inside the other gate under you. For example, Gate 5A.

Once you have loaded in, currently as the application runs externally, you will have to trigger it. The default trigger key is "Left-Shift + V" Performing this action will show a prompt on screen that will display the airports that are supported and in-range.

It is suggested to watch the tutorial from Aerosoft if you are having difficulty using the VDGS.

Video is available here

# Step 03.

After you have selected the gate of your choice, if you have installed the module correctly the screen will update showing your flight number, time and temperature.

In the menu of the VDGS if you wish, you can click the "FLTPLN" button in the top right of the window and enter the details of your destination.

This will then have the display show your OFF-BLOCK Time.

# **Step 04.**

If you find that the sensitivity of the VGDS Module is either too lenient or too precise, you may wish to adjust the sensitivity of it.

You can do this by locating your community folder and inside the folder called "aerosoft-vdgs-driver", you will find a shortcut called "aerosoft-vdgs-driver -options".

Once you have clicked this, a menu will popup allowing you to customise the options of the VDGS.

### WITHIN THIS FOLDER, YOU WILL ALSO FIND AN IN-DEPTH MANUAL FOR THE VDGS FROM AEROSOFT.

This includes the Module Open Key Combination and Auto-Connection of the jetway. You will receive the "OK" notification on the VDGS once you have arrived at your gate and stopped correctly.

PLEASE NOTE: CHANGES MADE HERE WILL REQUIRE A SIMULATOR RESTART.

### **Canberra International Airport**

We have included a fully funtional (to the best of our ability) GSX Profile for you to enjoy!

# Step 01.

Although GSX "should" detect our profile automatically, we have seen that this is not always the case, so we have written some instructions for those that don't have GSX perform correctly.

Inside the downloaded .zip file provided with our product you will find a folder called "GSX Profile" and inside you will find a file named "yscb-zhmsro.ini".

This needs to be placed into the appdata folder.

Expected Link is: "%appdata%/virtuali/gsx/msfs"

### Step 02.

You can now launch your simulator.

There should be no further steps other than to open the GSX Menu within the simulator and continue as you normally would.

#### NOTE:

IF YOUR SIMULATOR PROFILE APPEARS TO LOAD THE DEFAULT PROFILE YOU WILL NEED TO REMOVE YSCB JETWAYS / SERVICES FROM THE "FSDT INSTALLER"

### STEPS:

ONCE IN THE INSTALLER, CLICK CONFIG BESIDE GSX PRO.
ONCE INSIDE THE CONFIG, ON THE RIGHT-HAND SIDE SEARCH FOR "YSCB"
REMOVE IT FROM THE GSX WORLD - AIRPORT SERVICE CONFIGURATION BY MOVING IT TO THE DISABLED PANEL. THEN CLICK APPLY.

# **ABOUT CANBERRA**

### THE CAPITAL OF AUSTRALIA

Welcome to Canberra Airport, the gateway to Australia's National Capital.

### **ABOUT**

Welcome to Canberra International Airport for Microsoft Flight Simulator. Located in the heart of Australia's National Captital, Canberra Airport is a small hop from popular destinations such as Melbourne, Adelaide, Sydney, Brisbane & Coffs Harbour!

Canberra Airport is serviced by a range of airlines using a mixture of turboprop and jet aircraft such as the 737. In its dual role as a civilian airport and home to the VIP RAAF 34 squadron, it is also capable of supporting VIP aircraft from around the world including Air Force One and other large jets.

There are a number of flying schools and general aviation businesses operating from the GA area adjacent to the main terminal. You can find the two approved scenic flights in the enroute supplement linked on page 7 of this manual, which serve as an ideal introduction to explore the city of Canberra. Take your favourite sight seeing aircraft or helicopter and check out some of the many attractions such as Parliament House, the National Museum on the lake shore, the War Memorial, and the defence precinct including the Australian Defence Force Academy which overlooks the airport from Mount Pleasant.

So, what are you waiting for? Go and check it out!

#### **FEATURES**

Realistic Ground & Apron Texturing
Realistic Night Lighting
Replicated Airside Terminal Interior
Custom Jetways
Included VDGS System (Requires 3rd Party Application) - Not Xbox Compatible
Full PBR Texturing
Custom Animations
Improved Vegetation & Grass
Detailed Static Aircraft
Custom Taxiway Lighting & Signage
50,000+ Hand Placed Objects
150+ Custom Assets
20cm Custom Orthoimagery
