

Installation:

1) Unzip scenery and place the PAYA_Northern_Sky_Studio folder in your Custom scenery folder.

2) “Global airports” folder always must be lower than custom airports (X-Plane 11 only).

3) By default, the scenery works with default mesh and other 3rd party meshes.

3A) Ortho4XP tile created by NSS can be downloaded here. This tile created with a patch for PAYA airport and have some edited images and water, Z16, Arc source:

<https://drive.google.com/file/d/1zzGCBMekf5Qo0mLf-yYIfU8tE164YuMx/view?usp=sharing>

4) If you want to create your own tiles with a higher zoom or another source. You can use setting bellow.

5) Highly recommend using the “Global forest” addon which covers all US forestry

https://store.x-plane.org/Global-Forests-Vol2-North-America_p_1144.html
