

Cartayna Files for GSXPro – Pack 2 – v1.11

Changelog

- Updated to GSXPro v2.2.3.
- EDDL real-life VDGS.
- EFHK real-life VDGS.
- ENTC updated to v1.31 + VDGS + pushbacks fixed.
- KDCA updated to v1.40.
- KLAS updated to v1.76.
- LIRF real-life VDGS.
- VHHH real-life VDGS.

ICAO Airport	Developer	Version

- ✓ Working real-life VDGS overlapping non functional defaults.
- ✓ Configured with real pushbacks, thanks to Mr. Eike Lenzian, actual TUG driver on Düsseldorf Airport.
- ✓ Stand sizes adjusted as in real life.
- ✓ We strongly recommend repositioning the aircraft on the stand at startup, using the GSX menu (reposition aircraft option), to achieve a correct fit. All positions except general aviation have been adjusted.
- ✓ Remember to disable the default scenario in case you have third-party scenarios installed to avoid conflict.
- ✓ In some scenarios there are fixed (BGL) jetways that are obviously unable to move. Those are scenery limitations, not errors of the Cartayna file. On such cases where jetways are not operative (such as BGL) AND there is a near door to disembark by foot, the disembarkation option by defect chosen by Cartayna Files is set to be by foot (no jetway).
- ✓ Stands classified as 'Cargo' have the passenger bus option deactivated and the loading belts are set to 'cargo'.
- ✓ VDGS or Marshaller are added to all stands that can accept it, unless they already exists in original scenery.
- ✓ All pushbacks are referenced to current charts, showing nose facing and taxiway where it stops.
- ✓ Multiple, complex and long pushbacks available depending on the chosen stand.
- ✓ Pushbacks longer than standard, or more complex than usual, are marked as LONG in the GSX menu.
- ✓ Sometimes Left or Right pushback is not available, thus only one pushback is offered. (As in real life).
- ✓ Thanks for the purchase of this file which helps us in the long hours of development of our products. You're helping for future Cartayna Files packs to be released.

- ✓ Working VDGS overlapping non functional defaults.
- ✓ Stands E1 to E4 in the scenery matches S1 to S4 in charts.
- ✓ Stands E5 to E9 in the scenery matches N5 to N9 in charts.
- ✓ Parkings 1R to 35 in the scenery matches X1R to X35 in charts. (Cargo apron).
- ✓ Passenger bus, parking system and baggage loaders are not available in stands M (maintenance).
- ✓ Parkings L411 to L426 do not have red push due to construction zone on the scenery.
- ✓ Green pushbacks are actually push and pull. Since GSX does not have push and pull, we have done something as close as possible.
- ✓ Thanks to ATC Tony Siu for his help on pushbacks.
- ✓ We strongly recommend repositioning the aircraft on the stand at startup, using the GSX menu (reposition aircraft option), to achieve a correct fit. All positions except general aviation have been adjusted.

- ✓ Remember to disable the default scenario in case you have third-party scenarios installed to avoid conflict.
- ✓ In some scenarios there are fixed (BGL) jetways that are obviously unable to move. Those are scenery limitations, not errors of the Cartayna file. On such cases where jetways are not operative (such as BGL) AND there is a near door to disembark by foot, the disembarkation option by defect chosen by Cartayna Files is set to be by foot (no jetway).
- ✓ Stands classified as 'Cargo' have the passenger bus option deactivated and the loading belts are set to 'cargo'.
- ✓ VDGS or Marshaller are added to all stands that can accept it, unless they already exists in original scenery.
- ✓ All pushbacks are referenced to current charts, showing nose facing and taxiway where it stops.
- ✓ Multiple, complex and long pushbacks available depending on the chosen stand.
- ✓ Pushbacks longer than standard, or more complex than usual, are marked as LONG in the GSX menu.
- ✓ Sometimes Left or Right pushback is not available, thus only one pushback is offered. (As in real life).
- ✓ Thanks for the purchase of this file which helps us in the long hours of development of our products. You're helping for future Cartayna Files packs to be released.
