FUERTE

Microsoft *Flight Simulator*

Average 16 days during a year with precipitation, average temperatures between 20°C and 27°C. Exposed to the northeast trade winds with very low tops 600-700m that are too low to cause a significant increase in precipitation in the slopes exposed to the wind. That's Fuerteventura Island.

The airport itself carry near 7 million passengers per year with 45 000 operations.

Now it's time to experience all of this in MSFS2020! With newest technology used to develop this scenery we achieved stunning level of details keeping great performance and high FPS.
